

The new (old) class TH35

H. EDER

TH35 was very popular in Germany in the nineteen-eighties. It was then introduced from Günter Maibaum. The design features were 35 cm wingspan and minimum weight 2 grams. The propeller was freely definable.

Unfortunately, this led to oversized propellers featuring difficulties with torque. Currently we are reintroducing the class as TH35-L with limited prop size of max. 26 cm and rubber weight of max. 1 g. Flight times formerly used to be over 10 minutes.

Now with the limited version they are less, which is desirable because of the faster feasibility of competitions. We will fly the class as a special class at the next championships.

A TH35-L kit with ready formed blades (calculated with the Larrabee-program) including all parts I can supply (12 Euro + postage, eder-h@arcor.de)

Mylar foil: 0,9 Micron Mylar foil 50 m for 35 Euro. Indoor-balsapack 80-90 kg/m³ (0,8/1,0/1,5/2/3/4 mm) length 33 cm 10 Euro. C-grain for propellers on request.

Une intéressante initiative!
